Foswiki Release 1.0.9 - 17 Jan 2010

Foswiki - The Free and Open Source Wiki

Foswiki is an enterprise collaboration and information sharing tool targeted for professional use in many types of companies: from small businesses to large organizations.

Foswiki is a wiki: fundamentally, a website with editable web pages. It looks like a normal web site but it encourages contributions, edits, updates, questions, and answers from its users. It's a powerful way of enabling a community to communicate asynchronously using intranet and public internet websites. Foswiki is simple to learn and use. It aims to provide a transparent way for you to publish and exchange your ideas with others over the web and eliminates the one-webmaster syndrome of outdated intranet content.

Foswiki is a structured wiki with tools that enable users without programming skills to build powerful yet simple applications to process information and support workflows. Developers can extend the functionality of Foswiki with plugins.

Foswiki is the old TWiki project under a new name. Restrictions on the use of the TWiki brand resulted in many of its developers continuing the project under the new Foswiki name. Foswiki is backwards compatible with all content from older TWiki installations. Foswiki 1.0 ships with a TWikiCompatibilityPlugin installed and activated by default, thus enabling most extensions made for TWiki to work under Foswiki. Foswiki is released under the GNU General Public License.

Foswiki 1.0 Releases

- Foswiki 1.0.0, the first Foswiki was released on 09 Jan 2009.
- Foswiki 1.0.1 was released internally in the development community 23 Feb 2009 but we found a few important bugs that made us decide not to publish it and instead release a 1.0.2. It is a patch release with around 70 bug fixes and only very few minor enhancements.
- Foswiki 1.0.2 was built 25 Feb 2009 and again we decided to stop the publishing for quality reasons because of one important bug.
- Foswiki 1.0.3 was built 28 Feb 2009. We decided to stop the publishing because of a severe bug in EditTablePlugin introduced in 1.0.1 when fixing another bug.
- Foswiki 1.0.4 was built 19 Mar 2009. It is a patch release with more than 120 bug fixes relative to 1.0.0 and only very few minor enhancements.
- Foswiki 1.0.5 was built 25 Apr 2009. It is a patch release with more than 150 bug fixes relative to 1.0.0 and a few enhancements. This patch release further enhances the robustness and the security of the Foswiki software.
- Foswiki 1.0.6 was built 21 Jun 2009. It is a patch release with more than 200 bug fixes relative to 1.0.0 and some enhancements. This version introduces a major enhancement in security against Cross-Site Request Forgery. Further more a central translation framework got introduced which ease the translation process and enables all users to contribute to translations.
- Foswiki 1.0.7 was built 20 Sep 2009. It is a patch release with more than 240 bug fixes relative to 1.0.0 and some enhancements. This release fixes some serious issues introduced by the CSRF fix and the redirect cache fix in 1.0.6. Major enhancement that also fixes many annoying editor bugs is the upgrade of the Tiny MCE editor to version 3.2.2.
- Foswiki 1.0.8 was built 29 Nov 2009. It is a patch release with more than 280 bug fixes relative to 1.0.0 and some enhancements. This release fixes a short list of quite annoying old bugs incl a bug that

prevented efficient use of MailerContrib for producing newsletters. The Wysiwyg editor has been upgraded with the latest Tiny MCE editor release 3.2.7.
- Foswiki 1.0.9 was built 17 Jan 2010. It is a patch release with more than 320 bug fixes relative to 1.0.0 and several enhancements. This release fixes many bugs in the Wysiwyg editor, bugs related to more advanced wiki applications and bugs in the Plugin API. It contains several bug fixes and enhancements related to security and spam fighting.

Pre-installed Extensions

Foswiki 1.0 is shipped with the following:

- **Plugins:** CommentPlugin, EditTablePlugin, EmptyPlugin, InterwikiPlugin, PreferencesPlugin, RenderListPlugin, SlideShowPlugin, SmiliesPlugin, SpreadSheetPlugin, TablePlugin, TinyMCEPlugin, TwistyPlugin, WysiwygPlugin
- **Contribs:** BehaviourContrib, JSCalendarContrib, MailerContrib, TipsContrib, TopicUserMappingContrib
- **Skins:** PatternSkin
- **Compatibility support** - TWikiCompatibilityPlugin

What's new — highlights

- Foswiki 1.0 is built on a new platform called Foswiki Stand Alone which adds support for FastCGI and enables more optimized functionality in `mod_perl` and other similar runtime environments. Foswiki Stand Alone also enables future features such as running Foswiki by itself without a separate web server (for example, from a memory stick). You can ensure your applications and plugins will work properly on the new platform (and thus with any future capabilities dependent on the new architecture) by testing them out now with Foswiki 1.0.
- A TWikiCompatibilityPlugin has been created that enables most extensions made for TWiki to work under Foswiki, and to support seamless migrations from TWiki to Foswiki.
- The PatternSkin has been given a facelift: The PatternSkin topic offers a choice of multiple themes, the sidebar can be placed either on the left or right, a frame can be added around the main content area, and a TWiki theme is available to make it easier for those upgrading from TWiki (dimensions such as the top bar size match the dimensions in the TWiki PatternSkin).
- The "Advanced Search" page now supports a query-based search.
- A new section type, "expandvariables", adds better control over macro expansion in topic templates. You can now create template topics with sections where all macros contained within the sections are expanded.
- A "Copy topic" feature is now present in the "More topic actions" tools.
- IF conditions have been expanded with an "isempty" test condition.
- `viewfile` script can be used as a webserver *ErrorDocument* enabling both more secure attachments and user focused error dialogs.
- The Foswiki tgz / zip distribution file now has a top-level directory — Foswiki-x.y.z (x.y.z representing the version) — in which all of its files and subdirectories are contained.

Security Updates

- Foswiki 1.0 has secured the powerful but also vulnerable URLPARAM macro against cross site scripting (XSS) attacks. URLPARAM now by default encodes a short list of unsafe characters `'"<>%` which eliminates most XSS possibilities encountered with URLPARAM. This protects all topics using the URLPARAM macro without requiring any changes to them.
- Functions QUERYPARAMS, ORIGURL (skin macro) are secured against XSS attacks. QUERYPARAMS, like URLPARAM, is now encoded with the new, safe encoding.
- The print preview link is no longer vulnerable to XSS attacks.
- Additional security fixes have been made, based on security audits performed by the Foswiki team. Sensitive data from the topic text and web client requests are validated for safety.
- From Foswiki 1.0.5 an additional security feature has been added so that saving data now requires the http method POST.
- Foswiki 1.0.6 introduces a major security enhancement, protecting against Cross-Site Request Forgery. The extra safe "double submit" algorithm, as recommended by the Open Web Application Security Project (OWASP) project has been used. This is the same algorithm used by several major banks and other security-conscious institutions, and requires that users have Javascript enabled.

See Foswiki:Support.SecurityFeatures for more information on these, and other, Foswiki security features. This is recommended reading for all Foswiki administrators.

- Foswiki 1.0.7 extends the strikeone protection to also include attachment of files
- Foswiki 1.0.9 extends the strikeone protection to also include user registration. Default minimum password length is now 7 characters (does not apply when upgrading)

Upgrading From TWiki

Foswiki is compatible with content generated using TWiki releases up to and including 4.3.1, as part of its design. This compatibility is at the disk file level, and means that upgrading from TWiki is easy and reliable.

As part of the creation of the Foswiki project, the Foswiki community is evaluating all of the hundreds of extensions that are available for TWiki. All that are working are ported over to the Foswiki name space. Many of them are being enhanced through the removal of bugs and security vulnerabilities, resulting in better, more functional plugins for Foswiki. The most popular plugins are already ported and more are added every day.

Terminology changes from TWiki

As part of the first Foswiki product release, various topics and terms were changed to avoid using the TWiki brand name and to more accurately reflect their purpose, including the following:

- The TWiki web is now called System, as it contains configuration information for the entire Foswiki installation. The TWikiCompatibilityPlugin provides backwards compatible support for references to the TWiki web, in order to facilitate migrations from TWiki to Foswiki.
- The %TWIKIWEB% and %MAINWEB% variables are now called %SYSTEMWEB% and %USERSWEB%
- Topics in the Foswiki distribution have been renamed to eliminate the TWiki word and to make the titles more readable (for example, Plugins, Skins, and so forth).
- All templates, CSS and Javascript names have been changed from twikiXxxxx to foswikiXxxxx
- Key terminology changes:

TWiki term	Foswiki term
TWiki variable	Macro

TWiki term	Foswiki term
preference(s) variable	preference setting, or macro when referring to expansion of same
TWiki form	Data form
TWiki Plugin	Plugin
TWiki Template	Skin Template
Topic Template	Template Topic
TWiki Markup Language (TML)	Topic Markup Language (TML)
TWiki Application	Wiki Application

Topic names changed in System web (former TWiki web)

Old name	New name
ATasteOfTWiki	BeginnersStartHere
TWikiAccessControl	AccessControl
TWikiAddOns	ContributedAddOns
TWikiContribs	Contribs
TWikiContributor	ProjectContributor
TWikiCss	CascadingStyleSheets
TWikiDocGraphics	DocumentGraphics
TWikiDocumentation	CompleteDocumentation
TWikiDownload	DownloadSources
TWikiEditingShorthand	EditingShorthand
TWikiEnhancementRequests	EnhancementRequests
TWikiFaqTemplate	FaqTemplate
TWikiFAQ	FrequentlyAskedQuestions
TWikiForms	DataForms
TWikiGlossary	GlossaryOfTerms
TWikiHistory	ReleaseHistory
TWikiInstallationGuide	InstallationGuide
TWikiJavascripts	JavascriptFiles
TWikiLogos	ProjectLogos
TWikiMetaData	MetaData
TWikiPlugins	Plugins
TWikiPreferences	DefaultPreferences
TWikiReferenceManual	ReferenceManual
TWikiRegistration	UserRegistration
TWikiReleaseNotes04x02	ReleaseNotes01x00
TWikiRenderingShortcut	RenderingShortcut
TWikiScripts	CommandAndCGIScripts
TWikiShorthand	ShortHand
TWikiSiteTools	SiteTools
TWikiSkinBrowser	SkinBrowser
TWikiSkins	Skins
TWikiSystemRequirements	SystemRequirements
TWikiTemplates	SkinTemplates
TWikiTemplates	TemplateTopics
TWikiTopics	TopicsAndWebs
TWikiTutorial	TwentyMinuteTutorial
TWikiUpgradeGuide	UpgradeGuide

Old name	New name
TWikiUserAuthentication	UserAuthentication
TWikiUsersGuide	UsersGuide
TWikiVariablesQuickStart	MacrosQuickStart
TWikiVariables	Macros
TWikiWebsTable	WebsTable
TWikiRegistrationAgent	RegistrationAgent

TWikiPlannedFeatures, TWikiReleaseNotes04x00, TWikiSite, and WhatDoesTWikiStandFor have been removed.

Topic names changed in Main web

Old name	New name
TWikiAdminGroup	AdminGroup
TWikiGroupTemplate	GroupTemplate
TWikiPreferences	SitePreferences
TWikiGroups	WikiGroups
TWikiContributor	ProjectContributor
TWikiUsers	WikiUsers
TWikiGuest	WikiGuest
TWikiRegistrationAgent	RegistrationAgent
TWikiAdminUser	AdminUser

These changes have the following consequences when upgrading from TWiki to Foswiki:

- You can either continue to use TWikiAdminGroup as your administrators group, or migrate your admin users to the Main.AdminGroup topic.
- The users in the TWikiUsers topic must be merged into the Main.WikiUsers topic.
- Your site preference settings from Main.TWikiPreferences must be copied to the Main.SitePreferences topic.

Please see UpgradeGuide#CopyUsersAndCustomizations for more information.

Important Changes since Foswiki 1.0.8

This release fixes some of the new bugs that Tiny MCE Editor 3.2.7 introduced in previous release. This relates to bugs that are only seen in specific browser versions but are quite annoying to the users affected. This upgrade will improve the Wysiwyg experience.

The release includes many more minor bug fixes seen only by very advanced application developers and plugin developers.

It contains several bug fixes and enhancements related to security and spam fighting. The very advanced strikeone CSRF protection that was introduced in 1.0.6 has now also been implemented to make it harder to create registration bots. Reset of password and change of email address features are now both strike one protected and you can no longer change to an empty email address. Additionally logging has been added enabling the administrator to see both old and new email address after an email address change.

Default password length is now 7 instead of 1 character. Upgraders will be not be affected by this as the current used setting will already be in the LocalSite.cfg file.

A rare race condition has been identified where .htpasswd files could be truncated on a very busy site or during a spam robot attack. Foswiki now uses a file locking with a semaphore file to efficiently protect .htpasswd file from ever being changed by more than one process at a time.

Important Changes since Foswiki 1.0.7

The Wysiwyg editor is now using Tiny MCE editor version 3.2.7

The mailnotify feature has been fixed/enhanced so you can run newsletter in both 'changes' and 'news' mode so you can use the feature to automatically send newsletters independant of the normal change notices

Important Changes since Foswiki 1.0.6

The Wysiwyg editor has been upgraded to using Tiny MCE editor version 3.2.2 which solves many editor related bugs. The pickaxe icon has been replaced by a "Wiki Text" button as the pickaxe was hard to guess the function of. And the editor now has a full screen editing feature.

Several bugs fixed related to the Cross-Site Request Forgery feature.

Cross-Site Request Forgery feature has been enhanced to also protect against unwanted attachment of files

TablePlugin sorts numbers and dates better

EditTablePlugin handles SpreadSheetPlugin in footer rows correctly

Fixed a problem where Windows installations of Foswiki would create new users with non-working passwords

"Managing webs" feature redesigned for better usability

Important Changes since Foswiki 1.0.5

A major security enhancement against Cross-Site Request Forgery has been added. See Security Updates above.

EditTablePlugin has been through a major rewrite fixing many bugs and making it work much better with SpreadSheetPlugin.

Three new standard escapes $lt, $gt and $amp have been introduced to be used in formatted searches and other places that supports escapes in a format parameter.

A new footer parameter has been added to SEARCH

Two new parameters $ntopics and $nhits can be used in formatted searches to show the number of found items.

Important Changes since Foswiki 1.0.4

An additional security feature has been added so that saving data now requires the http method POST. This means that it is no longer possible to store data via an "<a href=..." link or img tag. It also means that if you have an application with an HTML form that creates new topics you must specify in the form tag method="post". This change is done to further tighten the security of Foswiki.

```
<form name="new" action="%SCRIPTURLPATH{save}%/Sandbox/" method="post">
    ...
</form>
```

The template webs _default and _empty are frequent targets for spammers because these webs are normally not monitored very carefully by the community around a Foswiki installation. These webs are now write protected so on an administrator can edit topics in these webs. When an administrator creates a new web it is important to remember to remove the access restriction from the WebPreferences in the new web.

SpreadSheetPlugin now has the new functions: $EMPTY(), $LEFTSTRING(), $RIGHTSTRING(), SUBSTRING(), $INSERTSTRING()

Important Changes since Foswiki 1.0.0

Fixed 70 bugs since Foswiki 1.0.0. Quite many of these are bugs that originate from TWiki 4.2.3. The most important bugs are

- Fixed some bugs related to expired sessions and date in session cookies.
- Fixed a number of bugs in configure related to installation of extensions
- Fixed a bug that prevented proper operation with https
- Fixed a bug related to VIEW_TEMPLATE and preview
- Fixed a bug related to RcsLite corrupting topic history
- Enhanced the user interface of configure
- Added approx. 30 more bugs to the list of bugs fixed in 1.0.0 that we missed in the 1.0.0 version of these release notes.
- Foswiki ships with {Sessions}{UseIPMatching} disabled by default now because the problems are getting bigger than the minimal security it gives

See full list of fixed bugs below.

Important Changes since TWiki 4.2.3

If this release had been a TWiki release it would have been 4.3.0

Since the fork of Foswiki happened while TWiki 4.2.3 was the current release, all changes since this release are listed below.

Foswiki Release 1.0.0 Details

Fixes

Item38	Replace backtick, exec and system calls to use Sandbox..
Item41	Remove the duplicate TAG topics - like VarREVINFO and VarREVINFO2
Item42	SECURITY: REVINFO reveals info for a topic the user does not have permission to view.
Item67	Any topic that contains a webform that does not exist, causes the topic to be uneditable.
Item94	SubscribePlugin trips up on missing _alert()
Item109	Rename all topics that have the T-word in them
Item110	Replace all occurences of TWiki in core, docs and default plugins with System
Item113	Rebrand css classes from twikiXxxxx to foswikiXxxxxx
Item115	Delete ClassicSkin
Item116	Rebrand javascript classes
Item124	undefined ICONTOPIC causes crash
Item125	Search error 'grep for \btest\b failed..
Item128	Error in oopsmore
Item136	remove pattern skin css classes from default skin - replace with twiki* ready for re-brand
Item137	Register show user's a failure when sendmail returns non-zero
Item139	Do not use an Oops redirect when a URL is mistyped
Item168	Review all SEARCH statements in the docco & convert to query or more contemporary TML
Item175	Create TWiki compatibility plugin
Item191	remove the stupid kids from pattern skin
Item203	Rebrand the TipsContrib
Item205	Replace all TWiki webnames to System
Item206	Linking to Supplemental Documents
Item212	stop url(http://... something.png) from being made into a html link, so inline images in css style isn't terminal
Item217	Replace module/plugin of message at the top of source files
Item218	Change the links in plugins to foswiki.org
Item221	Change Interwiki links in docs to Foswiki
Item230	lib/CPAN/lib missing in INC path
Item240	Interval parser is a bit crap; no tests, and does too much work
Item244	nonwikiword is never really checked
Item254	add -Autoconf to pseudo-install.pl
Item264	Rebrand pattern skin
Item265	Rebranding EditTablePlugin for Foswiki
Item267	Update file table in plugins that contains TWiki directories
Item273	Rename twiki.tmpl -> foswiki.tmpl
Item253	Remove hack from Foswiki.pm
Item287	Plugins documentation is incomplete
Item295	Replacing TWiki with Foswiki in core docs and default plugins
Item297	viewfile can't be used as a dropin replacement for {pubUrl}, and when viewfile fails it redirects to an oops mess
Item300	Rebranding root-level documentation
Item308	Preview renders a zero byte page when topic uses a view_template
Item309	Checkpoint save fotgets edit_template
Item312	Main.UserForm does not override TWiki.UserForm

Item314	Potential inadvertant linking on registration completion page
Item318	if you have a trailing / on your url, foswiki assumes all preceeding parts of the URL are webnames
Item319	Rewrite all SEARCH's in the distributed topics to use querySearch
Item327	Rebranding TablePlugin
Item328	Rebranding SmiliesPlugin for Foswiki
Item347	Rebranding SpreadSheetPlugin
Item367	Rebranding RenderListPlugin
Item370	Replace the favicon to Foswiki - and make the default setting come from System.ProjectLogos
Item375	Eliminate use of URLPARAM in docs so it becomes an XSS trap
Item384	Improve function getElementsByClassName
Item385	Improve layout attachment button and form header. Add attachment counter
Item386	Form.pm calls javascript function launchWindow
Item391	QUERYPARAMSTRING and TOC only url encodes parameter values but not the names
Item393	Add default safe encoding for QUERYPARAMS and add "safe" type to ENCODE
Item401	OSX fails unit tests - notably UTF8 seg faults.
Item405	ORIGURL used in template login used for example for reset password is an XSS attach vector
Item406	WebSearch does not work with quoted word strings.
Item407	WebRss and Atom search does not work with quotes words
Item417	Undefined subroutine &Foswiki::Users:: ApacheHtpasswdUser::ListIterator called
Item418	Rebranding SlideShowPlugin
Item427	Url parameters lost after login, when login has triggered by the "login-link"
Item444	Adding a anchor "foswikiTOC" for the TOC to be able to jump up to it
Item462	Improved user interface and interaction on the topic that is shown when a topic does not exist
Item471	WebSearch and WebSearchAdvanced keep moveing the user to the TWiki web, rather than staying where the users asked to be
Item474	PreferencesPlugin does not understand Local
Item486	Beginners start here has obsolete content
Item491	UserListByPhotograph moved to Image Gallery plugin
Item509	Remove un-needed pub/WebPreferences/logo.gif files which are not used and still TWiki logos
Item510	Wysiwyg editor takes the background colour for the html body for the editor instead of applying a white background.
Item511	Twisty on login screen creates slightly invalid markup
Item528	Code validation is weak in places
Item529	fix_local_links needs to point to foswiki.org
Item540	Messages missing in Foswiki.pm for INCLUDE Errors
Item541	calling search bin with no empty search string results in white screen instead of response
Item549	FORMFIELD plugin does not render documented format variables; missing literal tokens
Item567	LoginManager not working with IP matching because of code error in Foswiki's interface to CGI::Session
Item569	ENCODE turns the value 0 into empty string ''
Item570	SPACEOUT fails if value or separator are the string 0
Item599	Get a Foswiki working in Windows with strawberry perl
Item602	Release tarball could be in a subdirectory
Item629	Unable to access root docs on some installations of Apache.
Item649	Only see TWiki as a valid web if TWikiCompatibilityPlugin is installed and enabled.
Item661	Copy edits to Foswiki release 1.0.0 documentation
Item667	Add WebChangesForAllWebs to System web in the release
Item669	VarADDTOHEAD topic appears to be missing
Item681	can't access system webs like _default
Item1607	TOC does not distinguish two headlines that have the same text

Item2525	TablePlugin produces bad links for sorting when using "short" URLs
Item4463	Template Path is wrong for Skin customization using topics
Item4835	SpreadSheetPlugin functions SUBSTITUTE and REPLACE cannot return number 0 or empty string
Item4868	Bulk Register fails if Main web is Set ALLOWWEBCHANGE = TWikiAdminGroup
Item4906	Filename of attachments containing a wikiword inside ( ) messes up the file attachment table and other UI
Item5006	Interwiki rule: change Bugs: to Foswikitask:, and Rev: to Foswikirev:
Item5176	%SCRIPTSUFFIX is added twice in TOC links
Item5213	SCRIPTNAME not defined when using Sun One Web Server
Item5350	NONWIKIWORDFLAG is not resolved
Item5351	WebCreateNewTopic filters out international characters
Item5406	Don't let a skin update break existing left bars and top bar
Item5453	value of "0" improperly handled as param to ENCODE and SPACEOUT
Item5637	Move languages.cache to Working where webserver has permission to write so we can leave Locales read only
Item5848	Number of topics resulting from 2 SEARCH's onthe same topic seems in error (and seems to be duplicated too.
Item5852	Split out operators into seperate modules, so that extensions can plug in new operators.
Item5859	Plugin does not work if using NTLM
Item5900	PatternSkinCustomization and WysiwygPlugin still mention kupu and COMPOSER
Item5910	%TOC variable creates links with unnecessary query string
Item5922	$formfield data not being displayed in formatted searches
Item5926	Topics with Chinese in UTF8 destroys page view in Internet Explorer
Item5937	move initialization of SwitchBoard to TWiki.spec
Item5939	Rogue <p /> below </html> on every topic in every web
Item5943	TWikiRegistrationAgent should be in the admin group
Item5944	The padding:1px for textareas makes it hard to place the cursor at the begining of a line
Item5957	htdigest format password file gets stomped on password or email change/reset
Item5961	WysiwygPlugin and TWiki's odd idea of needing a space before *'s causes user surprise.
Item5965	Document `t' parameter of edit
Item5967	`viewfile` sees dots in file names as a web separator
Item5979	add non-alarmist PerlOnRedHatIsSlow detection to configure
Item5991	JSCalendarContrib does not work correctly in IE7
Item5994	turn on taint mode in configure and fix the problems
Item6000	Changes tracked by loginname not wikiname
Item6005	EditTable Changes "label"-formatted cell in unexpected way
Item6006	redirectCgiQuery doesn't handle fragments properly & needs minor tweak
Item6014	Integration of SortedHeadPlugin into core (Process Add To Head Adds)
Item6022	ENCODE{} treats % as safe character
Item6026	With header format emtpy table is initialized with one column only
Item6031	TablePlugin date sorting is broken.
Item6039	Preview does not respect VIEW_TEMPLATE
Item6041	TinyMCE bug with Firefox 3 and bulleted lists
Item6043	TWiki::Sandbox::sysCommand leads to errors with Extensions.FastCGIEngineContrib
Item6050	statistics script fails when cuid is not == login name (as login is whats in the log files...)
Item6054	No longer possible to have a twisty on one line without linebreak
Item6060	configure's get more extensions seems to require LWP
Item6061	TWiki::Func::getContext docco
Item6062	EditTablePlugin destroys verbatim-tags

Item6066	MailerContrib makes an assumption that cuid == loginname
Item6072	Can't call method "generate" on unblessed reference at lib/TWiki/Plugins/WysiwygPlugin/HTML2TML/Node.pm line 630.
Item6082	Deep recursion bug in query search
Item6083	configure hostname warning is case sensitive
Item6089	backslash at end of line inside verbatim and pre being used as line continuation
Item6095	Registration confirmation page fails to display when user confirmation e-mail can't be sent
Item6108	add docco for customising the registration emails.
Item8003	TWiki.SmiliesPlugin TOPIC variable not used for images

Enhancements

Item39	Add a query search option to webSearchAdvanced
Item51	Option to put buttons above the table
Item381	Add linkclass to style Twisty links
Item442	Throwing a OopsException can now be done with an message by argument
Item1873	Need Copy topic, not just move and rename
Item3647	Usability: Control over variable expansion in topic templates
Item4875	Add javascript function 'makeSafeForTableEntry'
Item5916	Add IsEmpty To IF conditions

Foswiki Patch Release 1.0.1 Details

Fixes

Item707	System.InstallationGuide has incorrect link to list of users
Item714	Add a Legacy engine, so Contribs that add scripts to bin dir can work
Item727	Comment plugin loses data
Item736	Comment plugin doesn't know about Compare Revisions
Item742	Wrong `print` in Foswiki::Engine::finalizeHeaders
Item744	Malformed HTTP-Expire-header => data loss after Back-Button in https preview page
Item745	Finalizing proof-reading of fr.po
Item750	INCLUDINGWEB and INCLUDINGTOPIC will cause confusion when used in an INCLUDE chain
Item751	Installed Plugins should be listed on the AdminTools topic explicitly
Item753	Foswiki::Time::parseTime has a major parsing bug for some date formats
Item754	found a pattern skin doc that uses T*
Item763	change /Foswiki to /System in foswiki_httpd_conf.txt
Item764	Additional extensions installed via configure "FindMoreExtensions" get not listed in the "Installed Version" column and are not "upgradeable"
Item767	AUTOINC in the title messes up merge and crashes
Item776	Installer truncates dependencies in plugins
Item781	Forms fields expand variables like $nop, $quote $percnt
Item791	Cannot set WEBHEADERART in pattern skin anymore
Item793	Print crops the page in PatternSkin and thus in Foswiki.org skin
Item818	Foswiki::Request::url doesn't honor $Foswiki::cfg{ScriptSuffix}
Item819	bad class selectors in template make it impossible to style certain elements

Item833	Missing SYSTEMWEB in foswiki_vars
Item835	Exchanged the current default skin by something which is not written in totaly broken html
Item836	view of raw information on a topic that doesn't exist causes BOOM
Item841	the warning parameter if ignored for Sectional INCLUDEs
Item846	Query search length operator not documented
Item855	Query syntax in IF statements does not work with underscore topic names
Item873	expired cgi session files not deleted
Item875	Small Docu update in func
Item885	bin/manage/Web goes BOOM
Item889	Documentation for protecting pub files with Apache incorrect
Item893	configure extension installer DOS's by doing a saveTopic and saveAttachment
Item904	Remove test strings
Item906	why are we using '.' to find setlib.cfg when FindBin is in Perl?
Item908	adding a script suffix seems to confuse the url parsing code
Item909	VIEW_TEMPLATE overrides preview template, leaving out all topic actions
Item913	JSCalendarContrib::addHEAD or Func::addToHEAD used in any xxxTagsHandler causes deep recursion
Item918	Small docu update for JSCalendarContrib
Item923	Adding two new fields to the default response header: Action and URI.
Item926	Foswiki.spec {AccessibleENV} must list FOSWIKI_ACTION instead of TWIKI_ACTION
Item928	Update documentation of Foswiki::Request
Item945	RcsLite corrupts file's history
Item952	email failure for password reset, pwd change and i think rego too oops output broken
Item962	Remove FOSWIKI_LAYOUT_URL, FOSWIKI_STYLE_URL, FOSWIKI_COLORS_URL from FINALPREFERENCES
Item965	{Register}{HidePassword} = $FALSE; not respected when the password is generated by Register.pm
Item972	Undefined subroutine &Foswiki::Form::Select::TAINT called
Item973	SEARCH adds extra separator for header
Item977	WebChanges eats first word of link text
Item980	Moving a topic doesn't update TOPICMOVED
Item990	Update graphics, html and css
Item995	When editing a form only, "Save and Continue" leads to the full edit screen
Item1002	System.InstallationGuide doesn't mention Development.FoswikiStandAlone
Item1010	Configure opening and closing of panels is clunky
Item1011	Configure fails with cryptic error in Configure/Checker.pm line 315 when RCS is not available on the system
Item1014	Configure complains when extra spaces are added in data structure
Item1016	ISO time formats have no timezone designator
Item1017	EditTablePlugin again cannot save textareas with formatting because of wrong handling of new lines
Item1018	Protect verbatim class="xxx" when editing
Item1020	TemplateLogin corrupts origurl param
Item1022	?logout=1 ignores the requested topic and returns to original topic
Item1023	System.CommandAndCGIScripts is missing docco on ?logout=1 url param
Item1029	TemplateLogin provides status 200 if no username is give, changed to 400
Item1053	Fix broken HTML
Item1070	Line75 of Sandbox.pm has an excess $
Item1073	Configure should not load Plugins that are hidden - ie files starting with a dot
Item1074	Remove link from data form table in preview
Item1078	Remove unwanted spaces in default templates

Item1094	invalid expiry date for session cookies
Item1097	HIDECOMMENTS is broken
Item1121	Sync the default apache config with the ApacheConfigGenerator
Item5352	Improve Email address validator to be more correct.
Item5853	PurePerl taint error inspired fix.
Item5920	TWikiGroups shows all members twice
Item6128	Login names with dots not working properly
Item8051	Use of uninitialized value in list assignment

Enhancements

Item523	Small user interface improvements to configure
Item967	Publish the iterators
Item1015	Add "use factory settings" links to Configure
Item1049	Table improvements for configure's FindMoreExtensions

Foswiki Patch Release 1.0.2 Details

Fixes

Item630	Fix the code in extender.pl to use UNIVERSAL::require instead of eval use
Item1119	Can crash foswiki by typing arbitrary meta into a topic
Item1123	Remove reference to Support.Foswiki01x00x00 in InstallationGuide
Item1124	EditTablePlugin cannot use Macros for the format string
Item1126	Change in 1.0.1 causes crash when you have standard installation and no LocalLib.cfg and we can no longer run unit tests on Windows
Item1132	Foswiki::Func::getPreferencesValue docco is a little weird
Item1134	Use of uninitialized value in string eq at .../lib/Foswiki/Meta.pm line 296.
Item1135	Missing API documentation
Item6018	GMTIME{}% does not return the right value for $week in ISO8601

Enhancements

Foswiki Patch Release 1.0.3 Details

Fixes

Item1055	Find More Extensions should compare installed version with latest version
Item1172	Foswiki::Request::param fails if parameter name is 0 or ''
Item1173	Javascript error with find more extensions
Item1176	Search page jumps focus to bottom
Item1177	configure doesn't install dependencies

Item1184	CALC inside table is not working
Item1189	Typo PatternSkinCustomization
Item1197	configure extension installer fails with taint error
Item1198	configure extension installer reports all extension rev numbers wrong

Enhancements

Foswiki Patch Release 1.0.4 Details

Fixes

Item993	Log is (too) inaccurate
Item1055	Find More Extensions should compare installed version with latest version
Item1172	Foswiki::Request::param fails if parameter name is 0 or ''
Item1173	Javascript error with find more extensions
Item1176	Search page jumps focus to bottom
Item1177	configure doesn't install dependencies
Item1184	CALC inside table is not working
Item1189	typo PatternSkinCustomization
Item1197	configure extension installer fails with taint error
Item1198	configure extension installer reports all extension rev numbers wrong
Item1212	save from preview does not work
Item1214	Add 'px' if no size unit is passed
Item1217	PatternSkinCssCookbookNoLeftBar advice could be a little more useful
Item1221	EditTablePlugin cannot read a TABLE tag with macros
Item1227	PermittedRedirectHostUrls don't show up in the configure web page
Item1236	foswiki has problems with "special" characters in usernames (e.g. +)
Item1242	EditTablePlugin cannot move rows correctly when we have footerrows
Item1267	statistics cronjob does not work
Item1268	EditTablePlugin javascript does not save the changes in the last row of a table
Item1274	admin tools topic should list WikiGroups topic.
Item1276	Setting new parent for a normal web seems to fail
Item1281	initial configure advice on creating admin user could be a little more direct
Item1292	EditTablePlugin puts line between EDITTABLE and TABLE with search results
Item1293	PurePerl SEARCH crashes on distributed topic
Item1299	Moving a web or single topic does not corrently update links in topics
Item1300	Foswiki::Store::createWeb uses hash values as keys when changing WebPreferences
Item1306	When your IP address changes after authentication you cannot reauthenticate and server may crash
Item1307	Moving a web does not correctly update links to the moved web
Item1308	EditTablePlugin has problems with included topics with included edittable definition
Item1316	Disable IP Matching by default to avoid problems for people moving between LAN and WLAN or using load share gateways
Item1332	querystrings with semicolon or & but no valid parameter assignment gives error log entries
Item8055	Adding TWiki::ListIterator and TWiki::LineIterator to TWikiCompatibilityPlugin
Item8072	Error in Bridge between TWiki::Time and Foswiki::Time

Enhancements

Item1604	Implement use of RELEASE tag for extensions in addition to VERSION

Foswiki Patch Release 1.0.5 Details

Fixes

Item647	You cannot SEARCH for the Value of "0"
Item931	Correct and simplify the {AuthScripts} documentation in configure
Item978	rewriteshbang.pl does not work with files as extracted from tgz
Item1050	Explanation at {ExtensionsRepositories} is not clear
Item1214	In TablePlugin - Add 'px' if no size unit is passed
Item1343	TinyMCEQuickHelp has bad META format, missing line feed causes it to show in topic text.
Item1349	Sandbox executes "-" instead of requested program on Strawberry perl on Windows XP
Item1354	SEARCHDEFAULTTYPE causes confusing and the misspelling means that people think this is the problem
Item1358	EditTablePlugin deep recurses in many cases
Item1372	Plugin installation fails on Windows - extender.pl can't find Archive::Tar
Item1384	Creating webs with empty field values in the submit form fails
Item1388	View topic since and other settings are not connected
Item1403	Use of uninitialized value at lib/Foswiki.pm
Item1413	System.WebLeftBarSearch search field javascript not blanking box when focused
Item1416	TOC anchor links broken
Item1443	We still have 1.0 format in distributed topics
Item1451	Typos on System.TextFormattingRules
Item1453	Too hard to create new switchboard entries, doc is poor
Item1456	Access viewfile without web/file results in oops
Item1458	Don't allow saving data when http method is GET
Item1468	Topics with regex quantifier characters such as + in their names prevent other topics from being moved
Item1472	Remove bookview from WebSearchAdvanced. And update docu to warn about it
Item1485	_default web permissions are wrong
Item1493	More screen shows wrong link to parent if the topic is in a subweb.
Item1502	Raw Edit javascript for resize window and font does not work in IE
Item1505	Plugin installation fails on windows - read-only files cannot be replaced.
Item1524	Country list on registration form is not 100% alphabetical
Item5471	The character 0 cannot be replaced using the replace-funtion of the SpreadSheetPlugin

Item8124	TCP TWiki web preferences too open

Enhancements

Item1374	Add New New $EMPTY(), $LEFTSTRING(), $RIGHTSTRING(), SUBSTRING(), $INSERTSTRING() functions to SpreadSheetPlugin
Item1381	Add depth parameter to META

Item1474	DocumentGraphics new images
Item4163	Bulgarian translation

Foswiki Patch Release 1.0.6 Details

Fixes

Item1013	WysywigPlugin requires HTML::Parser but does not ship with it and does not give dependency in Configure
Item1341	TinyMCE converts TML lettered & roman numeral lists back to numbered lists.
Item1397	Typewriter-Formatting does not work in tables
Item1406	SpreadSheetPlugin and EditTablePlugin cannot coexist
Item1528	SpreadSheetPlugin's WORKINGDAYS calculates incorrectly
Item1535	"Typewriter" applied to bold text does not work
Item1538	Topics in Main web and new webs do not validate as clean xhtml
Item1544	EditTablePlugin no longer disables sort when editing
Item1553	PatternSkin top bar height documentation
Item1556	installer installing files twice
Item1567	configure links to non-existent anti-spam plugin
Item1588	Not clear that limit parameter in SEARCH works at topic level and cannot be used to limit *multiple* results
Item1593	Installing plugins from vanilla Foswiki 1.0.5 does not work
Item1605	Correct the code docco in Func.pm
Item1634	VarFAILEDPLUGINS links need fixing
Item1640	CommentPlugin writes "%" as html-code, which prevents the use of Macros
Item1644	RSS and ATOM will not display correct if cover is set globally
Item1668	The action template in CommentPlugin creates actions on one long line
Item1671	Pathnames of Attachments inappropriate in default Plugins
Item1673	Mising Content-Type in mailresetpassword.tmpl
Item1675	Add pptx, docx and xlsx to icon type list
Item1678	socket implementation of Net.pm is broken
Item1682	SEARCH does not work well with format being blank
Item1688	Left over enableTWikiMandatoryChecks in edit template causes warnings in JS debuggers
Item1689	JS error in preview
Item1690	Call to the resetpasswd script is not logged
Item1703	preview fails when an unknown view_template is used
Item1707	Deleting attachments in NAT and QUICKMENU do not work
Item1711	Some authentication services do not pass on parameters
Item1712	Warning in TopicUserMapping when Registration is disabled
Item1713	WebSearch does not pass excludetopic parameter
Item1714	Remove (tm)wiki from search results
Item1717	class foswikiTopicText missing in WebCreateNewTopicTemplate and TopicDoesNotExistViewTemplate
Item1718	Hex values in topic form fields are misread as anchors
Item1722	FORMFIELD documentation is difficult to understand and there is an error in the example
Item1725	Oops: we could not recognize you truncated in French language
Item1726	CALC in EditTablePlugin causes errors during editing
Item1730	initPlugin does not get the $installWeb if $NO_PREFS_IN_TOPIC = 1

Item1732	EXTENSIONS.pm uses {version} without checking if it's undef
Item1738	Better line heights when font tag is used
Item1739	Prevent js error in edit screen
Item1752	PROXY is inadequately documented
Item3212	Rcs Lite can't recover from damaged version histories
Item5391	Dragging corners of table removes TML markup
Item8141	Variables/classes called old name in doc typo
Item8173	TablePlugin does not understand standard date formats
Item8184	Fix link to UserCommentsTemplate

Enhancements

Item886	Add footer parameter to SEARCH
Item1095	EditTablePlugin: Hide ugly long CALC when editing replaced by static text CALC
Item1568	Synchronise form submits with sessions to enhance further security against CSRF
Item1595	Add feature AddNumberOfTopicsToFormattedSearch to 1.0.6 and 1.1.0
Item1710	New standard escapes $lt, $gt and $amp to be used in SEARCH
Item5628	it would be useful if there was a version check in the wysiwyg JS

Foswiki Patch Release 1.0.7 Details

Fixes

Item966	configure fails with parse error if a Config.spec file has a PERL EXPERT section
Item1509	version comparison fails given x.y.z format
Item1572	Error using Configure -> 'Find More Extensions' after installing GaugePlugin
Item1687	Documentation bug in ManagingUsers, customizing registration emails
Item1729	Have more flexibility in Twisty's remember setting
Item1741	`%TOPICURL%` does not work correctly in `%INCLUDE%`
Item1766	Redirecting to http://foswiki_redirect_cache... on first login of a browser session
Item1768	%Q (info icon) Macro mistake
Item1776	Command line save gets stopped by validation
Item1780	Under Windows using sha1 passwords new registrations create non working password
Item1781	Uploading files can trigger taint errors if certain plugins are installed
Item1782	Errors in extender.pl, Archive::Tar not found
Item1805	Foswiki Validation Method 'none' doesn't work propperly
Item1818	add "new" countries to System.UserRegistration

Item1825	Wrong formatting of the Wikipedia InterWiki reference to Crontab article in System.SiteTools
Item1847	mailnotify doesn't expand BASEWEB properly
Item1878	Numerical Sort in table columns broken
Item1897	TinyMCEPlugin_installer: Version checking of dependency of WysiwygPlugin is confusing
Item1921	CSRF: `{Validation}{Method} = 'strikeone'` Confirmation Dialog messes up retarded execution macros
Item1941	Small improvement to rest example
Item1980	Sticky tags within Verbatim Tags results in data loss

Item2001	TablePlugin: Numbers with suffix do not sort if negative
Item2011	Small syle improvements for PatternSkin merged in from trunk; version for Foswiki 1.0.7
Item2018	give distributed topics useful and relevant parent's
Item2034	Missed some tmwiki rebranding in `tools/`
Item2051	EditTablePlugin assumes a TABLE tag when disabling sorting on the edit screen
Item2057	Improve error feedback unit tests
Item2058	Usability: links in headers should be visible as links
Item2061	vbar not escaped properly in logger
Item2078	Bum macro in form def name causes death by exception
Item2087	SpreadSheetPlugin forgets about zeros being floats as well
Item2091	Enabling LINKTOOLTIPINFO causes taint error
Item2099	WebCreateNewTopic deletes the just entered topic name when picking parent from list
Item2104	Update javascript to work with Explorer 8
Item2115	Upload doesn't strikeone
Item2117	RenderListPlugin Moved default themes out of plugin topic for efficiency.
Item2118	SmiliesPlugin Removed default preferences from plugin topic for efficiency
Item2381	documentation updates for 1.0.8
Item6024	Can't handle comment templates in subwebs
Item8230	Edittable is replacing SpreadSheetPlugin-formulas with the text "CALC" in headers and footers
Item8269	CommentPlugin: broken anchor target

Enhancements

Item310	Managing webs redesigned for better usability.
Item400	unit test runner should be more magical
Item1793	remove topic summary in list of backlinks in rename-topic
Item2070	Upgrade TinyMCE editor to v 3.2.2
Item8114	Replace the pickaxe icon by something more meaningful

Foswiki Patch Release 1.0.8 Details

Fixes

Item913	JSCalendarContrib::addHEAD or Func::addToHEAD used in any xxxTagsHandler and in some cases ADDTOHEAD causes deep recursion
Item1302	mailnotify ignores -news operand
Item1438	`textareabuttons` are not displayed when `NOWYSIWYG` is 1
Item1558	WYSIWYG does not work on Opera with Mac
Item1936	Search.pm assumes the {editby} field is a cUID and tries to getWikiName before it finds the real cUID
Item2043	parseTime should return undef for invalid date
Item2130	TablePlugin initsort parameter is not tested before use
Item2137	configure fails to show many many plugins in Find More Extensions
Item2148	If a user's loginname happens to be a wikiword reset pwd looks rubbish
Item2151	EDIT_TEMPLATE with missing edit template makes it impossible to edit the topic
Item2182	Broken link in PatternSkin docu

Item2183	Unable to center text with Wysiwyg editor
Item2222	Conversion to HTML failed. TML:
Item2230	mime.types needs entry for Office 2007
Item2238	Foswiki::Time does not recognise 1-Jan-2004 as a date
Item2260	MailerContrib cannot find email templates based on skin or web
Item2261	lease conflict page dosn't link properly to wikipages that aren't WikiWord's
Item2270	Help Tiny MCE's wordcount plugin get correct count when first opening up the editor
Item2315	Net.pm appears to be unable to fetch Foswiki extensions if LWP not installed
Item2316	escaped cUID's in topic for users that are not mapped are displayed in escaped ascii form
Item2320	send the wiki guest to the login screen if they navigate to a topic they are denied access to
Item2329	DEPENDENCIES version field cannot be empty
Item2348	don't fill the log files with uninited vars when previewing
Item2351	Use filetest 'access' instead of 'stat'
Item2352	WysiwygPlugin doesn't protect %Macros% with lowercase
Item2374	DocumentGraphics icons added to aid upgrading from old project
Item2377	don't use ref($this) to ASSERT on class, as it breaks subclasses
Item2381	documentation updates for 1.0.8
Item2404	Documentation of PatternSkinCustomization contains error about VIEW_TEMPLATE
Item2405	Backlinks tempates show topic form and attachments
Item2406	Allow the "allow non wiki word" message to be skinned
Item2407	Remove empty paragraph from login template
Item2408	Make action buttons easier to skin
Item2410	Remove hardcoded padding setting in WebChangesAlert
Item2411	NOSEARCHALL not intuitive
Item2412	Unable to select first attachment in TinyMCE insert image dialogue
Item2413	When I use a script that uses oops to show results, the web page title is wrong.
Item2414	configure crashes when some strange .po file exist
Item2417	Fix for horizontally compressed printing in Safari
Item5366	BulkResetPassword confirmation lacks an OK button
Item8084	Confusing "Bad request" during upgrade when going 3048 => 3236
Item8292	System.MailerContrib in 1.07 and F.O needs URL typo to SubscribePlugin fixed

Enhancements

Item2245	Upgrade TinyMCEPlugin to 3.2.7
Item2341	Add blockquote button to TinyMCE

Foswiki Patch Release 1.0.9 Details

Fixes

Item446	Make redirectto aware of anchors in links
Item1462	WYSIWYG-attaches to wrong topic when creating new autonumbered topic
Item1960	Extension installer fails on FreeBSD
Item2301	$LISTJOIN can't handle empty separator
Item2305	Setting $Foswiki::cfg{AllowInlineScript} = 0 will kill strikeone

Item2337	ATTACHFILESIZELIMIT check fails confusingly if value is "0 "
Item2423	getRevisionInfo can't deal with dots in the web name
Item2434	BASE windowtitle
Item2437	MailerContrib documentation points to a non existing PublishContrib
Item2439	rewriteshbang typed wrong in installation guide
Item2447	Unable to apply "normal" format in wysiwyg editor
Item2470	Remove spurious newline from attachagain template
Item2476	Slow, erratic editing in plain textareas with IE8
Item2482	Improved documentation for date formats in TablePlugin
Item2494	Document that registrationHandler does not trigger until activation key submitted
Item2495	OopsException documents false example using macros in parameters
Item2499	Enabling a wrong language in the LocalSite.cfg breaks Foswiki
Item2504	Search for windows should be setup for Pureperl instead of Forking
Item2506	ICONTOPIC setting is too literal, so a space at the end breaks the setting
Item2510	Universal Edit Button link does not append an accurate timestamp, so the browser loads a cached edit screen
Item2512	Remove photoshop files from distribution
Item2520	Reading form field values from topic happens with tainted topic name
Item2529	Issues with beforeSaveAttachment plugin dispatch (release 1.0.x scope)
Item2532	InstallationGuide refers to `Foswikibug` instead of `Foswikitask`
Item2534	TinyMCE FAQ mentions TINYMCEPLUGIN_DISABLE instead of NOWYSIWYG
Item2537	Race condition in updating htpasswd can cause truncated htpasswd file
Item2542	empty paths in configure result in "NOT SET"
Item2544	sync TWikiDocGraphics
Item2551	The strikeone action parameter name clashes with manage script
Item2559	Some calls to checkValidationKey contains unused parameters
Item2564	Lots of broken parent links in System web
Item2567	Check for valid email address when changing email address
Item2606	Topics created on 29th of February in a leap year fails
Item2609	extender.pl broken - Plugin installation fails if using tar instead of Archive::Tar
Item2641	Link to "more topic actions" on history page calls wrong template
Item2647	RSS feed of search does not store excludetopic
Item2649	Search box in top bar does not keep search phrase
Item2650	Link to advanced search transfers limited number of search parameters
Item2651	Not all search parameters are used in search on WebSearch
Item8213	Default settings for JSCalendarContrib are currently hard coded. Move them into a config.spec.
Item8354	Newsletter mode fails if %STARTPUBLISH%/%STOPPUBLISH% used in the topic
Item8374	"Delete last row" button removes newly added rows

Enhancements

Item2497	Add strikeone protection also for the register case
Item2556	Increase default {MinPasswordLength} to 7 characters
Item2565	Log when user changes email address
Item2568	Add strikeone protection for reset password and change email on 1.0.9
