JQueryCorner

Homepage: http://jquery.malsup.com/corner
Author(s): Dave Methvin, Mike Alsup
Version: 2.02

This plugin adds cross-browser support for rounded corners. For modern browsers the appropriate css attributes are used while there is a fallback strategy for others.

Usage

JavaScript API

The javascript API: `corner()` takes a single string argument:

```
$('#myDiv').corner("effect corners width");
```

with

- effect: name of the effect to apply, such as round, bevel, notch, bite, etc (default is round).
- corners: one or more of: top, bottom, tr, tl, br, or bl.by default, all four corners are adorned.
- width: width of the effect; in the case of rounded corners this is the radius. specify this value using the px suffix such as 10px

Any element using the `jqCorner` class will be rounded. Options are extracted from the `data-corner` attribute of the markup.

Foswiki integration

Add the **`jqCorner`** class to elements that should be rounded. Additional parameter are provided via the `data-corner` attribute of an HTML element. (Note, that this differs from other plugins where parameters are provided inside the `class` attribute using JQueryMetadata.)

Examples

.jqCorner { margin:1em 0.8em; padding:1em; float:left; width:250px; } .jqCorner h2.jqCorner { margin:-1em -0.7em 0.7em -0.7em; padding:0.8em; border:0px; float:none; width:auto; }
