JQueryFoswiki

Homepage: http://foswiki.org/Extensions/JQueryPlugin
Author(s): Michael Daum
Version: 2.00

This is plugin takes care of loading the jQuery core and default plugins and performs any initialization steps specific to Foswiki, For instance, it reads all <meta> tags from the html head as they have been set by Foswiki and constructs the `foswiki` javascript object to be used by other javascript plugins.

In addition it adds some basic Foswiki tags to make life easier using jQuery plugins, most notably `%JQREQUIRE{"pluginName"}%` to load a subsequent jQuery plugin and all of its dependencies, taking care where and how it is added to the html page.

Curent default plugins are: jquery.easing, jquery.metadata, jquery.bgiframe, jquery.hoverIntent
