Render List Plugin

Render bullet lists in a variety of formats

Syntax Rules

RENDERLIST Macro

- Place a `%RENDERLIST{ <parameters> }%` before any bullet list
 - ◆ The lists can be handcrafted, generated by another Plugin, a `%TOC%`, or the result of a `FormattedSearch`

- Supported parameters:

<code>"name" or theme="name"</code>	Select a rendering theme
<code>focus="any text"</code>	Focus list on a bullet with specified text
<code>depth="2"</code>	Remove bullets with an indent greater then the depth. The depth is relative to the highlighted bullet in case <code>focus</code> is specified

- Rendering themes can be defined by `<name>_THEME` Plugin settings
 - ◆ Each theme is defined by a comma separated list containing the render type and parameters required by that render type
 - ◆ There are different render types; this initial Plugin version has **tree** and **icon** render types
- Format of the **tree** render type:
 - ◆ Set `<name>_THEME = tree, <0/1 flag to suppress/show lines of first level>`
- Format of the **icon** render type:
 - ◆ Set `<name>_THEME = icon, <0/1 flag to suppress/show lines of first level>, <icon width>, <icon height>, <spacer graph>, <T-line graph>, <I-line graph>, <L-line graph>, <icon image>`
 - ◆ To define new Icon themes, attach images to this Plugin topic and set the parameters accordingly
- Focus bullet list:
 - ◆ Search bullet list for text. If a bullet is found:
 1. Highlight text and remove `[[][]]` links on bullet where text is found
 2. Reduce bullet list to show only its parents and children
 - ◆ This is useful to maintain one large bullet list with links to team pages, representing the organization of a company. Each team page can **INCLUDE** the bullet list with focus set to itself.

Bullets

- Use regular `*` bullets
- Start with level one
 - ◆ Increase indentation only one level at a time
 - ◇ Like this
- Decreasing indentation many levels at a time is OK
- Wrap long text with continuation lines, the Plugin does not do that for you
Align continuation lines with leading spaces like this

- You can specify an icon for a bullet of render type **tree** or **icon**:
 - ◆ Attach the icon to this Plugin topic, e.g. `myicon.gif`, or
 - ◆ Use one of the existing icons:  `globe.gif`,  `home.gif`,  `virtualhome.gif`,  `group.gif`,  `persons.gif`,  `virtualpersons.gif`,  `person.gif`,  `virtualperson.gif`,  `email.gif`,  `trend.gif`,  `folder.gif`,  `folders.gif`,  `file.gif`,  `files.gif`,  `doc.gif`,  `image.gif`,  `pdf.gif`,  `ppt.gif`,  `sound.gif`,  `xls.gif`,  `zip.gif`,  `see.gif`
 - ◆ Refer to an attached icon at the beginning of the bullet with:
 - ◇ `icon:myicon` Followed by normal bullet text
 - ◆ Any DocumentGraphics icon can be used as well:
 - ◇ `%ICON{name}%` Followed by normal bullet text

Examples

You type:	You get: (simulated)	You get: (if installed)
<pre>%RENDERLIST{"thread"}% * one * one.a * one.a.x * one.b * one.b.x continue * one.b.y * icon:person Tim * icon:person Mico * two * three</pre>	<pre>one one.a one.a.x one.b one.b.x continue one.b.y Tim Mico two three</pre>	<pre>one one.a one.a.x one.b one.b.x continue one.b.y Tim Mico two three</pre>
<pre>%RENDERLIST{"org"}% * one * one.a * one.a.x * one.b * one.b.x continue * one.b.y * icon:person Tim * icon:person Mico * two * three</pre>	<pre>home one home one.a home one.a.x home one.b home one.b.x continue home one.b.y Tim Mico home two home three</pre>	<pre>home one home one.a home one.a.x home one.b home one.b.x continue home one.b.y Tim Mico home two home three</pre>
<pre>%RENDERLIST{ "org" focus="one.b" }% * one * one.a * one.a.x * one.b * one.b.x continue * one.b.y * icon:person Tim * icon:person Mico * two</pre>	<pre>home one home one.b home one.b.x continue home one.b.y Tim Mico</pre>	<pre>home one home one.b home one.b.x continue home one.b.y Tim Mico</pre>

You get: (if installed)

23 Sep 2006:	Support for <code>img</code> tag and image URL after <code>icon:</code> (suggested by TWiki:Main.JanFilipsky); support for DocumentGraphics icons, such as <code>%ICON{folder}%</code> instead of <code>icon:folder</code> ; added <code>files.gif</code> and <code>folders.gif</code> (contributed by TWiki:Main.SteveHobbs)
25 Apr 2006:	SVN sync, Cairo + Dakar compatibility
14 Apr 2006:	TWikiRelease04x00 compatibility update
21 Nov 2004:	Added benchmarks (no code changes)
21 Mar 2004:	Internal change: Fixed unofficial function call
01 Mar 2004:	Added <code>FILE_THEME</code> and folder/file icons
29 Dec 2003:	Fixed rendering issue if focus bullet contains <code>icon:name</code> ; added <code>TREND_THEME</code>
16 Dec 2003:	Specify icons with <code>icon:name</code> syntax
11 Dec 2003:	Added <code>focus</code> and <code>depth</code> parameters
05 Dec 2003:	Fixed rendering issue with IE; added <code>EMAIL_THEME</code>
02 Dec 2003:	Initial version
