Preference settings

Foswiki has four levels of preferences settings:

1. Site-level settings: DefaultPreferences
 - ◆ Site name, proxy settings, access control, skin
2. Web-level settings: located in each Web, e.g. WebPreferences topic
 - ◆ Web specific access control, navigation links, colors
3. User-level settings: In each user's home page, e.g. WikiGuest topic
 - ◆ Settings that are only in effect when this user is logged in, such as LINKTOOLTIPINFO
4. Topic-level settings: Affecting current topic, for web applications

Preferences can be overridden by the next level down.
