META -- displays meta-data

- Provided mainly for use in templates, this macro generates the parts of the topic view that relate to meta-data (attachments, forms etc.) The `formfield` item is the most likely to be useful to casual users.
- Syntax: `%META{ "item" ...}%`
- Parameters:

Item	Options	Description
`"formfield"`	`name="..."`: name of the field. The field value can be shortened as described in FormattedSearch for `$formfield` `newline="..."`: by default, each newline character will be rewritten to ` ` to allow metadata that contains newlines to be used in tables, etc. `$n` indicates a newline character. `bar="..."`: by default, each vertical bar is rewritten to an HTML entity so as to not be mistaken for a table separator.	Show a single form field
`"form"`	*none*	Generates the table showing the form fields. See Form Definition
`"attachments"`	`all="on"` to show hidden attachments. `title="..."` to show a title - only if attachments are displayed. `template="..."` to use a custom template for the rendering of attachments; default `attachtables` is used.	Generates the list of attachments
`"moved"`	*none*	Details of any topic moves

`"parent"`	`dontrecurse="on"`: By default recurses up tree, this has some cost. Equivalent to `depth=1`
	`depth="..."`: Return only the specified ancestor.
	`nowebhome="on"`: Suppress WebHome.
	`prefix="..."`: Prefix that goes before parents, but only if there are parents, default `""`.
	`format="..."`: Format string used to display each parent topic where `$web` expands to the web name, and `$topic` expands to the topic name; default: `"[[$web.$topic][$topic]]"`
	`suffix="..."`: Suffix, only appears if there are parents; default `""`.
	`separator="..."`: Separator between parents; default `" > "`.
		Generates the parent link
