SCRIPTURL{"script"} -- URL of script

- Syntax: `%SCRIPTURL%` OR `%SCRIPTURL{"script"}%`
- `%SCRIPTURL%` returns the base URL of scripts - expands to https://iactwiki.ethz.ch/bin
- Expands to: `https://iactwiki.ethz.ch/bin/script`
- Example: To get the authenticated version of the current topic you can write `%SCRIPTURL{"viewauth"}%/%WEB%/%TOPIC%` which expands to `https://iactwiki.ethz.ch/bin/viewauth/System/VarSCRIPTURL`
- In most cases you should use `%SCRIPTURLPATH{"script"}%` instead, as it works with URL rewriting much better
- The `edit` script should always be used in conjunction with `?t=%GMTIME{"$epoch"}%` to ensure pages about to be edited are not cached in the browser
- Related: PUBURL, SCRIPTNAME, SCRIPTSUFFIX, SCRIPTURLPATH
